Subject: King Gold Mine spill

Hello Forrest,

R6 is getting engaged in the response to the King Gold Mine spill in Colorado, as the material is flowing downstream into New Mexico. We need to provide folks to serve as a source of technical expertise. The first role we're filling is POCs that are working from their normal workstation, but are on call to answer questions coming from the REOC. These calls may come after hours or on weekends also, so folks are on a "seat forward" basis. Overtime will be covered by Superfund Division for any work that is done outside the normal tour of duty.

I'd like to get your availability over the next two weeks to serve as POC.

There is also a need that may develop to have someone with monitoring and sediment expertise deploy to the Regional Response Center in Farmington, New Mexico, or Aztec, Colorado. This would be about a 10 day deployment if the travel time is included. We'll know more about the timing of this in a few days.

Let's talk tomorrow?

Jane B. Watson, Ph.D.

Associate Director

Water Quality Protection Division

EPA Region 6
